Графік роботи:	повний робочий день

Опис вакансії

DataArt has been engaged in software development and IT consulting since 1997. Companies that create interesting products and services have complex business processes, they want to beat the competition with the help of technology, and usually they turn to us. We, in turn, help them come up with technologies, build, implement, maintain, and upgrade them. Experienced Business Analysts are in demand in many projects. In one of them, we're improving the internal system of one of the world's top three biggest rating agencies. We're also working with the systems of a major online supermarket, and are developing an analytical platform for an offline retailer. It is also should be noted that we hire people not for a project but for a team. Projects change, but the DataArt network of companies with its infrastructure, support, and tools of professional development stays. DataArt has a flat structure, which means we don't have superiors and subordinates. The engineers directly communicate with the customers' representatives and are free to choose the tools for the job (as long as not constrained by other factors). We have free internal language and technological courses, hold international conferences, participate in other party conferences, provide employees with insurance, and take care of them in all kinds of ways. DataArt's network consists of 17 sales and development centers (US, UK, Argentina, Germany, Bulgaria, Poland, Russia, Ukraine, and Latvia). Our specialists can work in any of the centers after discussing it with the project team (and if they desire to, of course).

Required Skills and Experience:

- At least 3 years of experience working as a business analyst;
- Organizing an effective interaction between the project team and the customer;
- Determining business requirements of the client and developing possible solutions;
- Analyzing and documenting requirements;
- Verifying the implemented products according to the requirements;
- Managing the requirements;
- Participation in planning, resolving disputes, risk evaluation;
- End-user product training;
- Experience working with financial industry-related projects knowledge of basic terms and key standards;
- Good spoken English (the clients are English-speaking only).

Additional Competences:

- Experience in writing specifications and developing drafts of user interfaces;
- Requirement management during cycle, knowing of project life cycle models;
- Business processes modeling, knowledge of notations and methodologies;
- Understanding the techniques for identification of requirement and the ability to put them practice;
- Knowledge of business analysis and requirements management theory;
- Ability to express yourself and present your ideas both in Russian and in English;
- Social skills, verbal and written literacy;
- to skillfully convert vague and unstructured information into distinct requirements;
- Willingness to travel.

DataArt offers:

- Professional Development:
  — Experienced colleagues who are ready to share knowledge;
  — The ability to switch projects, technology stacks, try yourself in different roles;
  — More than 150 workplaces for advanced training;

— Study and practice of English: courses and communication with colleagues and clients from different countries;
— Support of speakers who make presentations at conferences and meetings of technology communities.

- The ability to focus on your work: a lack of bureaucracy and micromanagement, and convenient corporate services;
- Friendly atmosphere, concern for the comfort of specialists;
- Flexible schedule and the ability to work remotely;
- The ability to work in any of our development centers.
